Profile

- BSc Cyber Security graduate with hands-on blue team experience in log analysis, network traffic inspection, and full incident investigation under time pressure, using Splunk, Wireshark, Autopsy, and DeepBlueCLI.
- Strong offensive background (red team internship, 50+ compromised machines) brings an attacker's perspective to alert triage and threat hunting.
- Captain of a university CTF team and lead developer on a threat-intelligence platform; fluent in English and Arabic, and able to translate technical findings into clear, actionable reporting.
- SAP-certified in end-to-end business processes, bridging software engineering and enterprise operations.

Technical Skills

- **SIEM & Monitoring:** Splunk, log analysis, alert triage, threat hunting
- **Frameworks:** MITRE ATT&CK, OWASP Top 10, incident response lifecycle, IOC extraction
- **AI & LLMs:** Building Multi-agent systems (CrewAI, LangChain, Google ADK), Context & Prompt engineering
- **Offensive:** Nmap, Burp Suite, Metasploit, BloodHound, Impacket, Ligolo-ng, Chisel, Hashcat, Kali Linux
- **Programming:** Python (9+ years, primary), Bash, C, Java

Experience

Red Team Internship – Cyber 50 Defense Academy Jul 2025 – Sep 2025

- **Identified and documented** 35+ exploitable vulnerabilities across 10+ simulated corporate networks and web applications by executing advanced reconnaissance, enumeration, and full-chain exploitation methodologies.
- Mastered 50+ advanced cyber tactics, achieving a 100% completion rate across intensive hands-on labs focused on Active Directory attack vectors, web application exploits, and **OWASP Top 10** vulnerabilities.
- **Accelerated remediation** timelines by 25% for simulated stakeholders by delivering 3 comprehensive, executive-ready engagement **reports** that categorised critical findings by exploitability, impact, and risk prioritisation.

Self-Directed Blue & Red Team Lab Work Ongoing

- **Analysed** network traffic and diagnosed anomalies with **Wireshark** across multiple projects, isolating malicious flows from noise.
- **Compromised** 50+ vulnerable machines across Hack The Box, OffSec Proving Grounds, and OSCP challenge labs; executed full AD attack chains (BloodHound, Kerberoasting, Pass-the-Hash, DCSync, GPO abuse) and pivoting with Ligolo-ng, Chisel, and SSH.
- Practised Linux/Windows **privilege escalation**, web exploitation, and post-exploitation credential hunting; maintain a 1,500-line command reference.

Projects

Security Breach Investigation 24-Hour Practical Exam

- **Investigated** a simulated multi-stage breach under a 24-hour limit, analysing logs and forensic artefacts with Splunk, Wireshark, Autopsy, and DeepBlueCLI; **analysed** phishing emails to identify the initial access vector.
- Correlated evidence across all data sources to reconstruct the full attack flow and timeline, consolidating findings into a structured incident report.

ThreatLens – AI-Powered Cyber Threat Intelligence Platform Team Lead, 6-person team

- **Lead developer** on a full-stack CTI platform (React/TypeScript, FastAPI/Python, PostgreSQL) that ingests threat reports, extracts IOCs, and maps adversary behaviour to MITRE ATT&CK.
- Built a **Multi-agent** AI system with guardrails and defined guidelines for autonomous IOC extraction, MITRE ATT&CK mapping, and output validation, surfaced through an analyst dashboard.

Systems & Data Engineering

- Built C projects (multithreaded POSIX concurrency, system-call-driven process/file management), a normalised MySQL database, and an ML regression model, OS internals and data skills relevant to endpoint and host analysis.

Certifications

- Security Blue Team Level 1 (BTL1)
- CompTIA Security+
- CCNA: Introduction to Networks
- Cisco CyberOps Associate
- Cisco Network Security
- SAP Certified – Implementation Consultant
- OSCP – In Progress
- Microsoft Certified: Azure Fundamentals (AZ-900)
- AWS Academy Graduate – Cloud Foundations
- Red Hat System Administration I & II

Education

Curtin University, Dubai – BSc (Cyber Security), 3.5/4.0 GPA Sep 2023 – August 2026

Coursework: Network Security, Penetration Testing, Digital Forensics, Cryptography, Operating Systems.
